SUMMARY

Product designer with 4+ years in product design, owning problems end to end — framing, research, shipped and measured outcomes. I've built 0→1 AI products across iOS, Android, and web plus the design systems behind them, and I prototype in working code with AI (Claude Code, Cursor, Figma MCP) so ideas get tested as real software instead of static mocks. Because I ship production front-end myself, nothing gets lost in handoff.

EXPERIENCE

Senior Product Designer · Mondee JUL 2023 — PRESENT · HYDERABAD

- **Aarna AI, Mondee's B2B supplier listing platform:** mapped drop-off by funnel step, then rebuilt the workflow from dense multi-step forms into a conversation-first flow. **Listing volume tripled and drop-off fell 40%** against the pre-launch baseline; scaled to 10K+ active users.
- **Mirae, Mondee's consumer travel app:** sole designer across iOS and Android — conversational booking flows, real-time streaming responses, and a generative card system that turns raw fare and itinerary data into scannable, decision-ready UI.
- **Built the design system behind both products** — typography and colour tokens, component library, interaction patterns — now the source of truth across 50+ screens and two platforms.
- Ran design QA in production: reviewed builds against intent screen by screen, using a **106-point verification audit** on a cross-platform migration to catch gaps before release.
- Partner with PM and engineering in Agile sprints (JIRA) — shape requirements, push back when a brief solves the wrong problem, and annotate specs so engineers implement with minimal ambiguity.
- Run accessibility passes before each release: WCAG AA contrast, touch targets, font scaling, and screen-reader flows.

UI/UX Designer · Virtusa NOV 2022 — JUL 2023

- Enterprise B2B application UX — multi-step workflows and data-dense interfaces, from client requirements through high-fidelity, handoff-ready design.
- Owned 3–4 end-to-end workflows for a **banking client** — translated business and user requirements into wireframes, high-fidelity UI, interactive prototypes, and annotated specifications for a 5–7 person offshore engineering team.

UI Designer · GlobalLogic FEB 2022 — NOV 2022

- UI screens, interaction patterns, and prototypes for client digital products in cross-functional Agile teams.
- Delivered **30+ UI screens** and interactive prototypes for an enterprise digital product across 6+ Agile sprints, contributing reusable UI patterns and components back to the shared design library.

Graphic & Motion Designer · Prime Pixel JAN 2019 — DEC 2021

- Motion graphics and visual design (After Effects, Illustrator, Blender) — the typography, hierarchy, and motion foundation behind my interface work.

PROJECTS

Hita — AI Travel Companion (Live) · aihita.in SELF-INITIATED · LIVE

- **Sole designer and engineer** on a live consumer AI product — research, flows, design system, UI, and production code. Built on Next.js, React Native, Supabase, and the Claude API with a 12-agent conversational architecture.
- Evidence I can take a product from problem statement to deployed software without a team: every design decision was one I also had to implement and ship.

SKILLS

Product	End-to-end ownership, problem framing, user research, usability testing, funnel analysis, 0→1 product design, trade-off decisions
Tools	Figma (components, variants, auto-layout, variables & tokens), Framer, Google Stitch, After Effects, Illustrator, Photoshop, Blender
Craft	Design systems, interaction design, typography & hierarchy, data-dense interfaces, edge/empty/error states, responsive web + iOS + Android, motion, accessibility (WCAG AA), developer-ready handoff
AI Workflow	Claude Code, Cursor, Figma MCP — code-based prototyping, research synthesis, UX writing; conversational & agentic UX patterns
Build	React, Next.js, React Native, TypeScript, Tailwind CSS, HTML/CSS — ships production front-end; Agile/Scrum, JIRA

EDUCATION

B.Sc. Computer Science · Purvanchal University 2015 — 2018

UI/UX Design Certification · Prism Multimedia 2021
